

Phone in Your Pocket

To maximize your shot tracking, make sure your phone is on your person. Keeping your phone tucked into your pocket, or on your belt, will allow the ClubHub™ to communicate the location of the ball to your phone when you strike it.

What's Going On?

Here's the "science" behind tracking your shots. The ClubHub™ on your club detects the golf swing. It then communicates the swing data to the phone through the bluetooth connection. It's the phone's GPS that records the location of the shot.
